

Tutorial 2: Basic Terminology: Elementary Data Organization

- Q1. What is Algorithm?
- Q2. List and explain any **FOUR (4)** characteristics of an Algorithm.
- Q3. State the qualities of a good algorithm.
- Q4. What **THREE (3)** items do you need to identify in order to develop an algorithm?
- Q5. How is an algorithm expressed?
- Q6. Briefly explain a pseudocode.
- Q7. What are the components of a pseudocode.
- Q8. Write an algorithm to return the index of the maximum value between two given indexes in a given array.
- Q9. Given an array of size n, write an algorithm to return the minimum and maximum items of the array.
- Q10. Given an array of size n, write an algorithm to calculate the average of the values within the array.
