

AMIS1012 Ethics in Computing (Jan 2026 semester)

TUTORIAL 2

1. What is cybercrime?
2. How can cybercrime be classified? Provide examples for each of the classifications.
3. Discuss why computer-related security incidents have rapidly increased in recent years.
4. “An exploit is a type of computer attack that targets a system's vulnerabilities, taking advantage of flaws or weaknesses in its design or implementation.”

Explain how software engineers respond to exploits.

5. Differentiate between passive attacks and active attacks. Provide an example for each type of attack.
6. Classify whether the following cyber attacks belong to active attacks or passive attacks.
 - (i) Botnet
 - (ii) Eavesdropping
7. Describe **FIVE (5)** types of spam.
8. Distinguish between an ethical hacker and a cracker. Discuss how each impacts a business.
9. Discuss **TWO (2)** techniques used by hackers to create convincing phishing emails.
10. Is there any difference between a hacktivist and a cybercriminal? Explain your answer.
