

AMIS1012 Ethics in Computing (Jan 2026 semester)

TUTORIAL 7

1. What is a software development methodology? With the aid of diagrams, briefly describe **TWO (2)** commonly used software development methodologies in the industry.
2. Analyse the effect of not addressing software defects early in the development process on customer satisfaction, company reputation and long-term costs.
3. Explain the main goal of software testing.
4. What is the difference between manual testing and automation testing?
5. Software testers can incorporate both black-box and white-box testing methods when developing a dynamic testing plan for a software. Explain the difference between black-box and white-box testing.
6. Provide an example of a scenario where black-box testing is applied.
7. Provide an example of a scenario where white-box testing is applied.
8. Define quality in the context of software and explain its significance.
9. Explain how PDCA cycle provides continual assessment and improvement as part of software quality assurance processes.
10. Describe **FIVE (5)** characteristics of high-quality software products.
